About the Project:

The main objective for developing this online shoe store is to sell the shoes of different brands online. This project provides a lot of features to manage the products in very well manner. This project contains a lot of advance modules which makes the backend system very powerful. The project is divided into two categories: Admin and customer Login.

How System Works:

The main objective for developing this system is to provide all the functionality related to customer, to manage the product data wise, to manage the customer shipments, to manage order. Customers can login their account using personal username and password. Then they can search for the products they wish to buy. Also, they can add the product in Wishlist that they wish to buy in future. After the order confirmation, the customer can track order of product.

Importance of the system:

The importance of the system is that it offers easy online purchasing. It can save time and money for both the buyer and retailer, reducing phone calls about availability, specifications, hours of operation or other information easily found on company and product pages.

Main Goal of the System:

The main objective for developing this online shoe store is to sell the shoes of different brands online. This project provides a lot of features to manage the products in very well manner. it offers easy online purchasing, It can save time for both the buyer and retailer, reducing phone calls about availability
